Greene County Public Health Reports Second Positive Test for West Nile Virus in Mosquito Sample

JAMESTOWN, OH – Greene County Public Health received notice from the Ohio Department of Health (ODH) that West Nile Virus was detected in a mosquito sample sent to ODH. Greene County Public Health has trapped West Nile Virus-infected mosquitoes in the village of Jamestown at Frank Seaman Park. Greene County Public Health will continue to monitor adult mosquitoes in the surrounding communities. Public Health's Environmental Health team states that "A sample pool of mosquitoes from Frank Seaman Park has tested positive for West Nile Virus (WNV) located in Jamestown. The area was treated by our team on July 22-23".

West Nile virus (WNV) is a virus most commonly spread by infected mosquitoes, which can lead to severe fever, encephalitis (inflammation of the brain), or meningitis (inflammation of the membranes surrounding the brain and spinal cord). The primary carrier in Ohio is the northern house mosquito, *Culex pipiens*. Mosquitoes become infected when they feed on birds that are infected with the disease. Infected mosquitoes can then spread the virus to humans and other animals when they bite.

Mosquitoes have been collected using gravid mosquito traps, and then sent to ODH for identification and testing. Information on the total number, the type, and the sex of mosquitoes (only females spread the virus) has been collected.

The Environmental Health Services Director, Shadrick Adams, reminds everyone to be aware of their exposure to mosquitoes and to protect themselves by:

1. Eliminating standing pools of water, such as birdbaths, gutters, old tires, unused pools, boats and buckets, particularly after the great amount of rain as of late.
2. Avoid shaded areas where mosquitoes may be resting.
3. Limit outdoor activity during evening hours.
4. Wear protective clothing such as light-colored, long-sleeved shirts and pants.
5. Use insect repellents (those containing DEET can be very effective; follow manufacturers' usage recommendations).
